

CEZAR PEDROSO

Software Engineer — .NET Developer | ASP.NET Core | C# | Enterprise Software
Iowa, USA (Open to Relocation) | cezarapedroso@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Software Engineering (B.A.), Minor in Information Technology
William Penn University
Honors: Dean's List (5x), President's List (1x), Academic Achievement Award (Honors Program)

Expected December 2026
GPA: 3.8 / 4.0

EXPERIENCE

Application Developer Intern
Homesteaders Life Company

May 2026 – Present
West Des Moines, IA

- Engineer backend services and RESTful APIs powering an enterprise claims correspondence platform, using ASP.NET Core and C#
- Refactor core modules to reduce technical debt and improve long-term maintainability across a multi-developer codebase
- Design and maintain the application's data access layer with Entity Framework Core, modeling core entities and managing schema migrations
- Implement secure authentication and authorization using Microsoft Entra ID (Azure AD), safeguarding internal access for claims teams
- Build third-party API integrations to retrieve and process claims documents from external systems
- Partner with senior engineers in an Agile workflow, contributing through sprint planning, code reviews, and pull requests

Software Engineer Intern
AI Equity Alliance

Sep 2025 – Nov 2025
Oskaloosa, IA

- Designed and built a full-stack citation management system for the City of Oskaloosa, enabling officers to issue citations digitally and citizens to view and contest citations online
- Implemented role-based access control for admins, clerks, officers, and treasurers, including analytics dashboards and audit logs
- Built infraction management, media upload, and PDF generation features using Node.js and Tailwind CSS
- Collaborated directly with city stakeholders to translate operational requirements into working software features

Web Development Intern
Jeremy Empie Web Design LLC

May 2025 – Jul 2025
Oskaloosa, IA

- Developed and deployed 7 custom-coded websites to production for small business clients using HTML, CSS, and JavaScript
- Maintained existing client sites, including plugin and software updates
- Supported server maintenance and managed Active Directory for client systems

PROJECTS

DotDet (.DET)
Open-source .NET production-readiness analysis platform for multi-project ASP.NET Core solutions

- Shipped DotDet v0.1 Preview, a developer tool that analyzes ASP.NET Core applications and identifies production-readiness risks before release
- Implemented analysis across architecture, dependency injection, EF Core migrations, security configuration, and API readiness, producing source-linked findings with severity, confidence, evidence, and remediation guidance
- Designed a React reporting workbench with readiness scoring, root-cause grouping, Code Explorer, Engineering Guide, saved history, finding dispositions, and JSON/Markdown/HTML exports
- Hardened private repository and upload workflows with GitHub OAuth, server-side token handling, sanitized history/export/browser storage, safe untrusted-project analysis, rate limits, concurrency limits, and timeout controls
- Began calibrating the analysis engine against representative ASP.NET Core applications to reduce false positives, validate scoring, and improve report quality
- Validated the platform with 10+ users and reviewers, incorporating feedback to refine analysis accuracy and the reporting experience

Schema Architect
Configurable backend project generator for .NET applications

- Engineered a tool that parses SQL DDL across 6 dialects (SQL Server, PostgreSQL, MySQL, SQLite, Oracle, IBM Db2) and generates EF Core-ready starter projects
- Designed 5 selectable architecture templates (Standard EF Core, Clean Architecture, DDD, Minimal API, MVC API), generating entities, DbContext, DTOs, and controllers
- Built an interactive schema explorer with static schema-health analysis (missing keys, nullable foreign keys, relationship validation) prior to code generation
- Designed as a privacy-first, static-analysis tool requiring no live database connection or credentials; open-sourced under the MIT License

Document Approval System
Document governance and approval platform for enterprise workflows

- Engineered a full-stack document governance platform (ASP.NET Core 9 API, React/TypeScript client) enforcing department-scoped Author, Reviewer, Approver, and Administrator roles
- Implemented an explicit workflow state machine (Draft, Review, Approval, Approved, Rejected, Changes Requested) with server-side authorization, optimistic concurrency control, and atomic audit logging
- Designed immutable document versioning with exact approved-version pinning and a searchable administrative audit workspace with filtering and pagination
- Configured production-grade Microsoft Entra ID authentication (Microsoft.Identity.Web, MSAL React) atop a layered architecture, with xUnit/integration test coverage and SQL Server/SQLite provider support

TECHNICAL SKILLS

Languages:	C#, SQL, JavaScript, TypeScript, HTML, CSS
Backend:	ASP.NET Core, REST APIs, Entity Framework Core, LINQ, OAuth2/OIDC, Dependency Injection
Developer Tools:	Roslyn, MSBuild, Visual Studio, VS Code, Postman
Cloud:	Azure DevOps, Azure App Service, Microsoft Entra ID, Git, GitHub, CI/CD
Databases:	SQL Server, PostgreSQL, MySQL
Frontend:	Blazor, React, Tailwind CSS
