

CEZAR PEDROSO

Software Engineer — .NET Developer | ASP.NET Core | C# | Enterprise Software
Iowa, USA (Open to Relocation) | cezarapedroso@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Software Engineering (B.A.), Minor in Information Technology

William Penn University

Expected December 2026

GPA: 3.8 / 4.0

Honors: Dean's List (5x), President's List (1x), Academic Achievement Award (Honors Program)

EXPERIENCE

Application Developer Intern

Homesteaders Life Company

May 2026 – Aug 2026

West Des Moines, IA

- Developed backend services and REST APIs for an enterprise claims-correspondence platform using ASP.NET Core and C#.
- Designed and maintained Entity Framework Core data models and schema migrations supporting core claims data workflows.
- Refactored shared modules and optimized document-processing methods to improve performance and long-term maintainability.
- Added structured logging with Serilog and expanded automated test coverage using Postman and xUnit to improve reliability and troubleshooting.

Software Engineering Intern

VTEX

Jan 2026 – Apr 2026

Remote

- Developed and maintained backend services for a high-visibility project using C#, .NET, ASP.NET Core, and RESTful APIs.
- Designed data models and implemented database access with Entity Framework Core, including LINQ queries, entity relationships, and schema migrations.
- Built and integrated APIs, implemented business logic, resolved backend defects, and contributed through testing, code reviews, and collaboration with experienced engineers.

Contract Software Engineer

Self-Employed

Jul 2025 – Present

Remote — Clients in Brazil

- Delivered custom web applications and enterprise asset management (EAM) systems for 4 mechanical and industrial maintenance companies in Brazil, including a barcode-based asset tracking and preventive-maintenance alert system for one client's fleet of industrial compressors, replacing manual, paper-based tracking processes.
- Built full-stack solutions using C#, .NET, React, Blazor, SQL, and PostgreSQL, covering equipment inventory, maintenance scheduling, work order tracking, and client-specific reporting features.
- Managed the complete development lifecycle independently, including requirements gathering, architecture, testing, cloud deployment, and ongoing client support.

Software Engineer Intern

AI Equity Alliance

Sep 2025 – Nov 2025

Oskaloosa, IA

- Designed and developed a full-stack citation-management platform for the City of Oskaloosa using Node.js, PostgreSQL, and Tailwind CSS, replacing a slow existing system.
- Implemented approximately five role-based workflows for city personnel and citizens, including digital citation issuance, online review and disputes, audit logs, analytics, media uploads, and PDF generation.
- Designed the database and backend architecture, implemented authentication and testing, and incorporated stakeholder feedback into the prototype as it moved toward operational use.

PROJECTS

DotDet (.DET)

Open-Source .NET Production-Readiness Analysis Platform

- Developed and deployed a web platform that analyzes multi-project ASP.NET Core applications using Roslyn and MSBuild, identifying production-readiness risks across architecture, dependency injection, EF Core migrations, security configuration, and API design.
- Created source-linked findings with severity, confidence, evidence, root-cause grouping, and remediation guidance, and documented calibration work to reduce false positives and improve analysis quality.
- Built a React reporting workbench with readiness scoring, code exploration, saved history, finding dispositions, and JSON, Markdown, and HTML exports.
- Secured repository and upload workflows with GitHub OAuth, server-side token handling, sanitized storage, rate limits, and execution timeouts.
- Validated the platform across 10+ applications and with 10+ users, including professional developers.

Schema Architect

Configurable .NET Backend Project Generator

- Developed a multi-dialect SQL parsing and code generation platform that converts DDL from SQL Server, PostgreSQL, MySQL, SQLite, Oracle, and IBM Db2 into compilable EF Core backend projects.
- Built a hybrid parser using regex and a custom state machine to process tables, composite keys, relationships, and navigation mappings without a full SQL AST parser.
- Implemented five configurable architecture templates (Standard EF Core, Clean Architecture, DDD, Minimal API, MVC API) with downloadable, editable entities, DbContext, DTOs, and controllers.
- Added an interactive schema explorer with validation for missing keys, nullable foreign keys, and other schema risks before code generation.

Document Approval System

Enterprise Document Governance Platform

- Developed a full stack document governance platform using ASP.NET Core 9, React, TypeScript, SQL Server, and Microsoft Entra ID, with database backed department and role authorization.
- Implemented a sequential approval workflow, covering submission, review, change requests, approval, and rejection, with ownership and role checks enforced at the API layer.
- Added immutable document versioning, approved version tracking, optimistic concurrency, audit logging, and integration tests for authorization and workflow rules.

TECHNICAL SKILLS

Languages: C#, Python, SQL, JavaScript, TypeScript

Backend: ASP.NET Core, REST APIs, Entity Framework Core, Dependency Injection, Serilog

Developer Tools: Roslyn, MSBuild, Visual Studio, VS Code, Postman

Cloud: Azure DevOps, Azure App Service, Microsoft Entra ID, Git, GitHub

Databases: SQL Server, PostgreSQL, MySQL

Frontend: HTML, CSS, React, Blazor, Tailwind CSS
