CEZAR PEDROSO

Software Engineer | C# / .NET | ASP.NET Core | React | SQL

Oskaloosa, IA | (641) 931-0461 | cezarapedroso@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Software engineer specializing in C#/.NET and ASP.NET Core, with professional experience building production backend and full-stack applications using React and SQL. Experienced across insurance, government, and industrial maintenance, with a focus on APIs, secure authentication, automated testing, and cloud CI/CD. Available December 2026.

EXPERIENCE

Application Developer Intern | Homesteaders Life Company, West Des Moines, IA May 2026 – Aug 2026

- Built backend services and REST APIs in **C# and ASP.NET Core** for a production claims-correspondence platform.
- Designed and maintained **Entity Framework Core** models and database migrations that supported claims processing.
- Refactored shared modules and optimized document-processing workflows, improving maintainability and performance.
- Secured the platform with **OAuth 2.0 / Microsoft Entra ID**; added structured logging (**Serilog**) and automated testing (**xUnit, Postman**).

Software Engineer Intern | William Penn University, Oskaloosa, IA Sep 2025 – Present

- Built a **municipal citation management application** using React, TypeScript, Express, and PostgreSQL.
- Integrated **barcode scanning and GPS-based incident mapping** for driver's license data capture and incident location tracking.
- Created a **CI/CD pipeline with GitHub Actions and Microsoft Azure** to automate application build, testing, and deployment workflows.
- Assessed application security using **OWASP** guidance, identifying authentication, session management, and data integrity risks.
- Built a university **scheduling and enrollment platform** (ASP.NET Core, EF Core, MySQL) that assigns courses, professors, and classrooms under scheduling constraints, plus a backend service that forecasts course demand from historical enrollment data and recommends schedules.

Contract Software Engineer | Self-Employed, Remote Jul 2025 – Present

- Delivered custom software and asset-management systems for **4 mechanical and industrial maintenance companies in Brazil**, owning the full lifecycle from requirements and architecture to testing, cloud deployment, and client support.
- Replaced paper-based workflows with a **barcode-based asset tracking and preventive-maintenance system** for industrial compressors.
- Built full-stack apps (C#, .NET, React, Blazor, PostgreSQL) for inventory, maintenance scheduling, work orders, and reporting.

Software Engineering Intern | VTEX, Remote May 2024 – Aug 2024

- Developed backend services for a **CRM platform** using C#, .NET, ASP.NET Core, and REST APIs.
- Designed relational data models and data access with EF Core, LINQ, and schema migrations.
- Built reusable **Blazor** components, integrated APIs, and fixed backend defects through testing and code review.

SELECTED PROJECTS

DotDet (.DET) | Open-Source .NET Production-Readiness Analysis Platform | dotdet.vercel.app

- Built and deployed a platform that analyzes multi-project ASP.NET Core apps for risks in architecture, dependency injection, EF Core migrations, security configuration, and API design.
- Produced source-linked findings with severity, evidence, and remediation guidance; calibrated detection to cut false positives.
- Built a React workbench (readiness scoring, code exploration, saved history, JSON/Markdown/HTML exports) secured with GitHub OAuth, server-side token handling, rate limiting, and execution timeouts.
- Validated across **10+ applications and 10+ users**, including professional developers.

Eltse Hall | Residence Life Management Platform | GitHub

- Built a full-stack app (React, TypeScript, ASP.NET Core, EF Core) for scheduling, resident management, and dorm checks, **used by Resident Assistants and the Hall Director**; I keep shipping updates based on their feedback.
- Structured the backend in Domain/Application/Infrastructure/API layers; secured it with ASP.NET Identity role-based authorization, antiforgery protection, and rate limiting.
- Tested domain, auth, and scheduling logic with xUnit and EF Core InMemory; deployed to **Azure Web App** via GitHub Actions CI/CD on every push to main.

EDUCATION

William Penn University | B.A. Software Engineering, Minor in IT Expected Dec 2026

GPA: 3.8/4.0 | Dean's List (5×), President's List (1×), Academic Achievement Award

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL, Python

Backend: ASP.NET Core, .NET, REST APIs, EF Core, LINQ, Express, OAuth 2.0 / Entra ID, ASP.NET Identity

Frontend & Data: React, Blazor, HTML, CSS, Tailwind CSS | SQL Server, PostgreSQL, MySQL

Testing & DevOps: xUnit, Postman, Serilog, Git, GitHub Actions, Docker, Azure, AWS (ECS/ECR), Azure DevOps
