CEZAR PEDROSO

Software Engineer | C# / .NET | ASP.NET Core | React | SQL

Des Moines, IA | (641) 931-0461 | cezarapedroso@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Software engineer specializing in C#/.NET and ASP.NET Core, with professional experience building production backend and full-stack applications using React and SQL. Experienced across insurance, government, and industrial maintenance, with a focus on APIs, secure authentication, automated testing, and cloud CI/CD. Available December 2026.

EXPERIENCE

Application Developer Intern | Homesteaders Life Company, West Des Moines, IA May 2026 – Aug 2026

- Developed backend services and REST APIs using **C# and ASP.NET Core** for a production life insurance claims correspondence platform, automating manual workflows and implementing business logic, CRUD operations, and editable email templates.
- Designed and maintained **SQL Server** database models using **Entity Framework Core**, implementing data relationships, migrations, and queries to support claims processing and correspondence management.
- Implemented **OAuth 2.0 and Microsoft Entra ID** authentication, JWT-based authorization, and role-based access control to secure API endpoints and manage user permissions.
- Wrote automated tests using **xUnit and Postman**, investigated production issues, and integrated **Serilog** for structured logging and audit tracking of application changes.
- Collaborated with stakeholders to translate business requirements into backend features, contributing to code reviews, pull requests, and CI/CD pipelines using **Azure DevOps**.

Software Engineer Intern | William Penn University, Oskaloosa, IA Sep 2025 – Present

- Independently developed and maintained **four concurrent full-stack projects** using React, TypeScript, Express, ASP.NET Core, PostgreSQL, and MySQL.
- **Oskaloosa Police Department:** Built a citation management system with driver's license barcode scanning to automatically populate citations, integrated third-party geocoding APIs for street addresses, implemented role-based access control, and wrote automated tests using Vitest and Playwright.
- **William Penn University – Scheduling System:** Developed a course scheduling and enrollment platform using ASP.NET Core, EF Core, and MySQL, handling professor, classroom, and course assignments under scheduling constraints. Built backend services to forecast course demand using historical enrollment data and implemented CI/CD pipelines with GitHub Actions and Azure.
- **William Penn University – Recruitment System:** Built a full-stack recruitment platform using React, TypeScript, and MySQL, allowing prospective students to enter the recruitment process while admissions staff and coaches manage recruit profiles, track application progress, and coordinate recruitment decisions.

Contract Software Engineer | Self-Employed, Remote Jul 2025 – Present

- Delivered custom software and asset-management systems for **4 mechanical and industrial maintenance companies in Brazil**, owning the full lifecycle from requirements and architecture to testing, cloud deployment, and client support.
- Replaced paper-based workflows with a **barcode-based asset tracking and preventive-maintenance system** for industrial compressors.
- Built full-stack apps (C#, .NET, React, Blazor, PostgreSQL) for inventory, maintenance scheduling, work orders, and reporting.

SELECTED PROJECTS

DotDet (.DET) | Open-Source .NET Production-Readiness Analysis Platform | dotdet.vercel.app

- Built and deployed a platform that analyzes ASP.NET Core apps for risks in architecture, dependency injection, EF Core migrations, security, and API design.
- Produced source-linked findings with severity, evidence, and remediation guidance; calibrated detection to cut false positives.
- Built a React workbench (readiness scoring, code exploration, saved history, JSON/Markdown/HTML exports) secured with GitHub OAuth, server-side token handling, rate limiting, and execution timeouts.
- Validated across **10+ applications and 10+ users**, including professional developers.

WPU Residence Life Management Portal | GitHub

- Built a **React, TypeScript, ASP.NET Core, and EF Core** application for duty schedules, resident records, room checks, dorm sweeps, incident reports, and PDF downloads, replacing manual forms and reducing duplicate work for staff. **Used by school staff with 25+ active users.**
- Implemented sign-in with **Microsoft Entra ID** and added **role-based access** so staff only see the information and hall data assigned to them.
- Tested scheduling, authentication, and resident-management logic with **xUnit**; deployed updates through **GitHub Actions to Azure Web App**.

EDUCATION

William Penn University | B.A. Software Engineering, Minor in IT Expected Dec 2026

GPA: 3.6/4.0 | Dean's List (5×), President's List (1×), Academic Achievement Award

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL, Python
Backend: ASP.NET Core, .NET, REST APIs, EF Core, LINQ, Express, OAuth 2.0 / Entra ID, ASP.NET Identity
Frontend & Data: React, Blazor, HTML, CSS, Tailwind CSS | SQL Server, PostgreSQL, MySQL
Testing & DevOps: xUnit, Vitest, Playwright, Postman, Serilog, Git, GitHub Actions, Docker, Azure, AWS (ECS/ECR), Azure DevOps
